🎓 EDUCATION

Present August 2018	**Birla Institute of Technology and Science, Pilani, Goa** | BE in Electronics and Instrumentation CGPA : 8.01/10/00

💼 WORK EXPERIENCE

July 2021 May 2021	**Microsoft** | Software Engineer Intern › Was part of the Microsoft Search, Assistance and Intelligence team, and worked on adding voice skills to a state-of-the-art chatbot › Added the complete pipeline for new, essential features to the bot, using TypeScript and Express to communicate with the bot and YAML to write training data `TypeScript` `Express` `YAML`
July 2020 May 2020	› Was one of the select 33 second year interns among all 500+ interns › Migrated a static website to a dynamic website which implemented systematic polling of APIs and real time update of components in ReactJS and deployed the web service on Azure › Added a system to existing .NET MVC project to integrate and run ReactJS pages on it with the use of transpilers and bundlers `JavaScript` `ReactJS` `C#` `AWS`
May 2020 Feb 2020	**Tessellate Imaging** | Machine Learning Intern › Worked on adding features such as cloud deployment of deep learning models, model optimization and resolving bugs in a set of open source tools › Helped in creating real-world applications such as automated plant-leaf disease classification, weapon detection and animal detection using custom libraries `Python` `PyTorch` `MXNet` `TensorFlow`

🗄 RESEARCH EXPERIENCE

CUE RELIABILITY IN GRAMMATICAL GENDER PREDICTION   AUGUST 2021 - PRESENT
Supervisor : 🔗 *Prof. Kenny Smith (University of Edinburgh)*

› Generated vector representations based on contextual and formal properties of the words
› Experimented extensively on the usability of both types of vectors in a task of noun gender prediction

DEPTH ESTIMATION FROM MONOCULAR IMAGES   AUGUST 2020 - PRESENT
Supervisor : 🔗 *Dr. A. Amalin Prince (BITS Goa)*

› Inferring depth information from a single RGB image to infer scene geometry in 2D
› Implementing recent vision models not based on convolutions and evaluating their performance for the task
› Performing application specific processing for autonomous vehicles, and advanced driver assistance systems (ADAS)

MODEL OF LEXICAL DEVELOPMENT IN CHILDREN   JUNE 2020 - MAY 2021
Supervisor : 🔗 *Dr. Veeky Baths (BITS Goa)*   📄 *Paper*

› Used word vector representations to study the semantic and syntactic lexical development in children
› Explored the usability of diachronic distributed word representations in cognitive modeling and analysis of the lexical development in children

👥 Conferences and Workshops

International CCCP (Cognition, Communication, Computation, and Perception) Symposium :
Dec 2020 • Organized by Institute for Cognitive Neuroscience, Higher School of Economics, Moscow
- Was one of the selected speakers at the iBrain Erasmus+ round-table, part of the *'Data Issues in Cognitive Neuroscience'* track
- Spoke on issues in child language data with respect to availability and privacy among other aspects

Research Week with Google
Dec 2020 • Organized by Google Research, India
- Among the 50 participants selected as a part of the NLU track across undergraduate, master's and Ph.D. students across India

💻 Select Projects

CHAINVOTER   JUNE 2019 - JULY 2019
Won First Runner-Up at Microsoft CodeFunDo++ Hackathon

○ Code
- Web and mobile application for secure online voting using blockchain.
- Implements two-factor authentication of voters using face recognition with Microsoft Face API and MongoDB database
- In the blockchain the creation of block uses User ID(containing Name, Party, Constituency, Aadhaar, Voter ID, and Signature(Name, Aadhaar, Voter ID) and hashes them. Also checks if the vote is a duplicate before adding it to the ledger

`Javascript` `Angular` `Typescript` `CSS`

RASOEE   JUNE 2020 - AUGUST 2020
Won First Runner-Up at Global PyTorch Summer Hackathon 2020

○ Code   ↗ Website
- Web and android application that identifies food dishes from images. The image classification model is trained in Pytorch using a EfficientNet B2 model as base, and some pre-processing done on the images
- The data of 308 unique classes of food items was scraped from the web and cleaned. The mobile application, built with Kotlin, runs completely on the edge and no active internet connection is required to identify the dishes
- The application also takes an image input, and returns the identified food item, its primary ingredients, link to a recipe and link to video tutorials for that dish
- The website is built with Django and hosted on Heroku

`Python` `Django` `Kotlin` `PyTorch`

⑂ Other Projects

- OCR Sudoku Solver
- Double DQN for Atari Pong in OpenAI Gym
- Text Cipher Algorithms in C++
- Object Detection in Real Time and in Images using YOLO v3
- Forest Cover Binary Classification using an Ensemble Model
- Russian AI Cup 2019 Bot (1st Round Qualified)

🏆 Achievements

Scholarships :
- 2017 • Uttar Pradesh Science Talent Search Exam **(UPSTSE) Scholarship** by Govt. of India

Competitions :
- 2021 • OpenCV Spatial AI Competition : Among the **top 210 finalists** from **over 1500** submissions worldwide and selected as one of the **25 general teams** in the **Central and South Asia** Region.
- 2020 • PyTorch Global Summer Hackathon : **First Runners-Up** in Web/Mobile Application Category out of **2,500 participants** from **114 different countries**

ℹ Miscellaneous

TECHNICAL WRITER @ Towards Data Science | You can find my articles here
HOBBIES | **Drums** (Performing member of the institute music society), **Quizzing** (Active member of the institute quiz club)
